

AFTERMARKET ONBOARDING ROAD MAP

Pollution control equipment ownership...simplified.

IN THE SHORT-TERM

- Review your system's **Recommended Spare Parts List** and place your order to stock your spare parts inventory. Develop a meaningful way to organize your spare parts storage space (alphabetically by tag number or part name, by part classification, etc).
- Determine a safe, shared location to store **Key System Documentation and Drawings** and ensure they are readily available to both system operators and service providers: the Process & Instrumentation Diagram (P&ID), Electrical Schematics, Sequence of Operation, copy of the PLC Program, the Expected Pressure-Temperature Profile, Recommended Spare Parts List, and Permit Compliance documents.
- Set up an **Operator Log Book** to record a historical record of daily, weekly, and annual inspections.
- Print copies of the **Technical Service Call Procedure Poster** and hang in areas convenient for your maintenance staff to access near the oxidizer. Save the 24/7 Anguil Technical Service number in staff cell phones.
- Assign personnel to complete **Weekly and Monthly Inspections** of your system using the checklists provided in your system Operation and Maintenance Manual.
- Have your staff read the **Oxidizer Service Series**.
- If you have **Remote Log-in Capabilities**, test your connection to ensure it works. Schedule time to regularly test this connection.
- Order and schedule **Quarterly Remote Operational Checks** to identify and prevent potential developing service issues.

LOOKING AHEAD

- Schedule your system's first **Preventive Maintenance Evaluation (PME)** by emailing jerry.sikora@anguil.com at least 2-3 months prior to your desired service.
- Consider including a **Destruction Removal Efficiency (DRE) Check-up** with your first PME to pre-test and document your oxidizer's performance to help eliminate surprises during expensive formal compliance testing.
- Schedule **Oxidizer Operator Training** for your maintenance staff with a qualified Anguil Field Service Engineer. Schedule out repeat refresher trainings for new employees.
- Schedule an annual **Operating Cost Review** to ensure you are getting the most for your operating dollars.
